

THREAT ADVISORY

Multiple vulnerabilities have been discovered in the Apache HTTP Server

TA202140

Threat Level

AMBER

Publish Date – Oct 06, 2021

There is a zero-day vulnerability (CVE-2021-41773) and a DoS vulnerability (CVE-2021-41524) in Apache HTTP servers. After a publicly disclosed exploit, the zero-day vulnerability has been actively exploited in the wild. The Hive Pro Threat research team recommends that you address these vulnerabilities as soon as possible.

Vulnerability Details

CVE ID	Affected Products	Affected CPE	Vulnerability Name	CWE ID
CVE-2021-41773	Apache HTTP Server: 2.4.49	cpe:2.3:a:apache_foundation:apache_http_server:2.4.49:*:*:*:*:*	Apache HTTP Server directory traversal.	CWE-22
CVE-2021-41524			Apache HTTP Server denial of service.	CWE-476
