

HivePro Uni5

Continuous **Threat Exposure Management Solution** that is tailored and customized to proactively identify threats and reduce an organization's attack surface.

Enterprise security departments are currently in an era of change. Enterprises today pack on technology and assessments to reduce their attack surface and vulnerabilities, but they still lose sight of reducing their exposure to threats. How is this possible? Only by multiple compliance-based risk assessments, arbitrary scores from siloed-point solutions, and so much noise with little actionable insight. Generic remediations serve only a few and leave out the many.

This is because none of the markets that stand today have vendors that correlate your true threats to your true risks. Many are great at mapping assets, but not applying a threat lens to it. Without calculating a true threat score, how can you truly know your true risk? When one part of this equation is flawed, the entire equation is flawed. You can't save yourself with best-guess security.

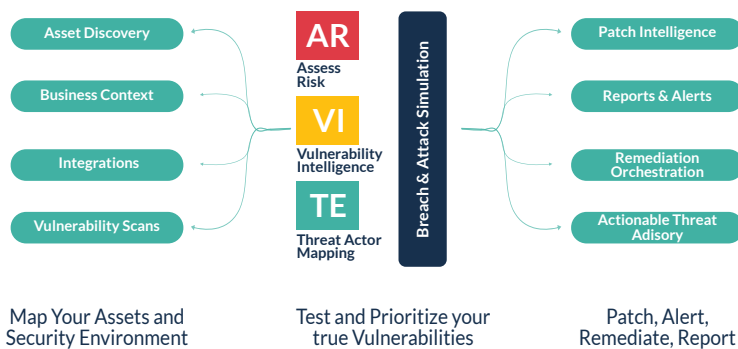

The most comprehensive program today on how to stop cyberthreats and related risks from forming in your organization is called **Threat Exposure Management**. It is a program that requires you to continuously plan for, monitor, and reduce your business-specific risks related to the most recent TTPs of cyberattacks. Threat Exposure Management Program can help your business prevent attacks which are specific to your business and security environment from happening before it even reaches you.

Gartner Definition

Continuously plan, monitor, and reduce your level of risk using validation technologies that prompt prioritized remediation actions based on the business context, so executives understand and engage.

5-Step Program

1. Scope
2. Discover
3. Prioritize
4. Validate
5. Mobilize

HivePro Uni5

HivePro Uni5 is a **Continuous Threat Exposure Management Solution** that is tailored and customized to proactively identify threats and reduce an organization's attack surface. Our goal is to prevent the most likely attacks to hit your organization from one platform. We manage your threat exposure in a practical and customized way by contextualizing your assets and threats, by prioritizing those vulnerabilities that matter most, and by assisting you in resolving those risks.

HOW HIVEPRO UNI5 HELPS

Contextualize

- Discover Assets and assign criticality
- Business Context – Vulnerability Intelligence
- Efficacy of Security Controls with Targeted Simulation

Prioritize

- Threat Centric View Vs Risk Score
- Predict Attack Path Scenarios using MITRE framework
- Prioritize Vulnerability remediation

Resolve

- Automate remediation of Threat Advisory
- Patch Intelligence
- Visibility across the Vulnerability Life Cycle

HIVE PRO MAKES AN IMMEDIATE IMPACT

**TIME TO REMEDIATE – RESPONSE
IN HOURS RATHER THAN DAYS**

**INCREASED EFFICIENCY WITH
ACTIONABLE INTELLIGENCE**

VISIBILITY TO BLIND SPOTS

Automate remediation of Threat Advisory, Get instant Visibility to prioritized Vulnerabilities on critical Assets

Real time analysis with Breach and Attack Simulation (BAS) module to check efficacy of your security controls. Actionable intelligence with automation to remediate threats in minutes

Proactive visibility to attacks, Hackers & their techniques that could exploit vulnerabilities on your network. Automate the remediation with few clicks
