# THREAT ADVISORY

**ATTACK REPORT**

## AgentTesla Trojan Returns with Phishing Campaigns Using GuLoader to Steal Secrets

Date of Publication

February 28, 2023

Admiralty Code

A1

TA Number

TA2023106

# Summary

**Attack Begin:** February 2023

**Affected Industry:** Government, Education, Manufacturing, Energy, Automobile and Internet

**Attack Regions:** Europe and Asia

**Attack:** The AgentTesla Trojan continues to pose a threat as attackers use GuLoader to deliver it in new phishing campaigns targeting various industries and countries.

# Attack Details

## #1

AgentTesla Trojan has remained active and has been targeting government agencies, businesses, and universities to steal secrets. Since February of this year, attackers have been using GuLoader to deliver the AgentTesla Trojan in a new round of phishing attacks. These attacks have been aimed at companies in the manufacturing, energy, and internet industries in various Asian and European countries, with phishing emails posing as product quotation requests.

## #2

GuLoader is a malicious file loader that first emerged in late 2019. It distributes and loads other malicious files through phishing emails and employs various obfuscation and anti-reverse analysis methods to evade detection by security products and researchers. In this latest campaign, the attackers targeted a Chinese automobile company with a phishing email containing an attachment named after a project and inducing the recipient to execute a VBS script, which loaded GuLoader into the device's memory. The final payload was the AgentTesla Trojan, which is a commercial .NET-based Trojan that steals secrets through functions such as keylogging, screen capture, and password theft.

# Recommendations

### Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

### Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.
