

Uni5 Xposure

Your **All-In-One**
Threat Exposure Management Platform

The Uni5 XPosure platform empowers Security teams with a unified, in-depth view of their assets, vulnerabilities, misconfigurations, security findings, and likely threats via our built-in scanners. Further, the Uni5 XPosure platform makes this rich intelligence actionable with AI-powered vulnerability prioritization, automated patching, breach and attack simulation, and bi-directional ITSM integration. Collaborate in-platform with all stakeholders from SecOps, ITops and DevSecOps to streamline remediation. Track pentesting workflows and integrate all findings. Ultimately, close the loop on risk management with customizable strategic, operational, and tactical reports for all interested stakeholders.

Uni5 XPosure is available in multiple deployment options (on-premise, cloud) with unmatched scalability and seamless deployment. We empower you with centralized security risk management, accelerating remediation cycles, and significantly reducing technical debt, all while staying one step ahead of emerging threats to bolster your cyber resilience.

Uni5 Xposure is an All-In-One platform purpose-built to control threat exposure and enable true end-to-end risk-based vulnerability management.

Features

Total Infrastructure Scanning

Out-of-the-Box, detailed scanners to conduct and manage security assessment for Code, Containers, Infrastructure, Web, Mobile Applications, Cloud assets

Cyber Asset Attack Surface Management

Discover, Fingerprint, and Analyze the exposure of your organization's internal and external digital footprint with our OOTB scanners and by Integration.

Vulnerability & Threat Prioritization

AI-based prioritization based on enhanced parameters: exploitability, attack vectors, patch availability, geography, vertical, ease of exploitation, vulnerability age, asset criticality, and compensatory controls.

Security Assessment & Penetration Test Management

Initiate, orchestrate and manage security assessments; automate internal and external pen test through a single dashboard for full findings visibility and control.

Remediation Validation & Security Control Testing (BAS)

Proactively identify, test and fortify your defense controls by intelligently running attack simulations, and thereby reducing the risk of successful cyberattacks.

Remediation & Workflow Orchestration

Integrate your ITSM and Patch Management tools of choice to escalate, manage, track and streamline remediation workflows between SecOps and ITOps. Verify patches and stay on top of unforeseen issues.

Collaboration & Reporting

Collaborate through integrated collaboration platforms on all findings; generate customizable reports to integrate intuitive findings from your analytics dashboard, including asset health scores, risk scores, remediation progress and more.

Patch & IoC Intelligence

Leverage 42,000+ patch intelligence data points from HiveForce Labs to enrich remediation options, or leverage built-in IoCs where patches aren't available to reduce organization's threat exposure.

Key Benefits

Eliminate siloed tool sprawl, security assessment sprawl, and critical risks

Simplify your security landscape and minimize risks. Our platform offers scalability, an intuitive interface, continuous asset discovery, and comprehensive vulnerability management. Test, prioritize, and remediate vulnerabilities across various domains while aggregating critical intelligence. Collaborate seamlessly on security workflows.

Control your threat exposure with continuous testing, patching, and asset health tracking

Master threat intelligence, response, and asset security. Tailor your defenses based on critical threats, high-risk vulnerabilities, and more. Test and strengthen your security measures, identifying hidden vulnerabilities and control gaps. Monitor asset health, automate patching, and foster cross-functional collaboration.

Eliminate manual spreadsheet processes, generic data, and intelligence blind-spots

Ditch manual processes and blind spots. Our platform provides a unified hub for security assessments with AI-driven risk prioritization. Access continuous threat intelligence, rich remediation recommendations, and DevSecOps with out-of-the-box Code Scanning, SAST and DAST. Facilitate efficient collaboration and reporting for pentesters.

Bring your tools and vulnerability data into one place to action on your critical security priorities and reduce risk

Consolidate your security tools and data for streamlined action. Benefit from out-of-the-box scanners and robust integrations with Asset Management, ITSM, Vulnerability Scanners, and Patch Management tools. Simplify your security operations and reduce risk comprehensively.
